# GEOCODING LOCATIONS OF HISTORIC RECLAMATION RESEARCH SITES USING GOOGLE EARTH

**Ruopu Li, Ph.D.**

Assistant Professor

Department of Geography and Environmental Resources

Southern Illinois University-Carbondale

**Southern**  
Illinois University  
Carbondale

# INTRODUCTION

- The American Society of Mining and Reclamation (ASMR) has been publishing annual conference proceedings and journal articles.
  - Around 30 years of collection of literature on mining reclamation
  - Many research sites were documented but were not geocoded
  - More efficient use of the ASMR resources is affected
- Google Earth can provide a platform for geographic data sharing, mashup and exploration.
  - Easy to use and freely available
  - Placemarks can be integrated into a webpage for web map display
  - The data format is widely supported

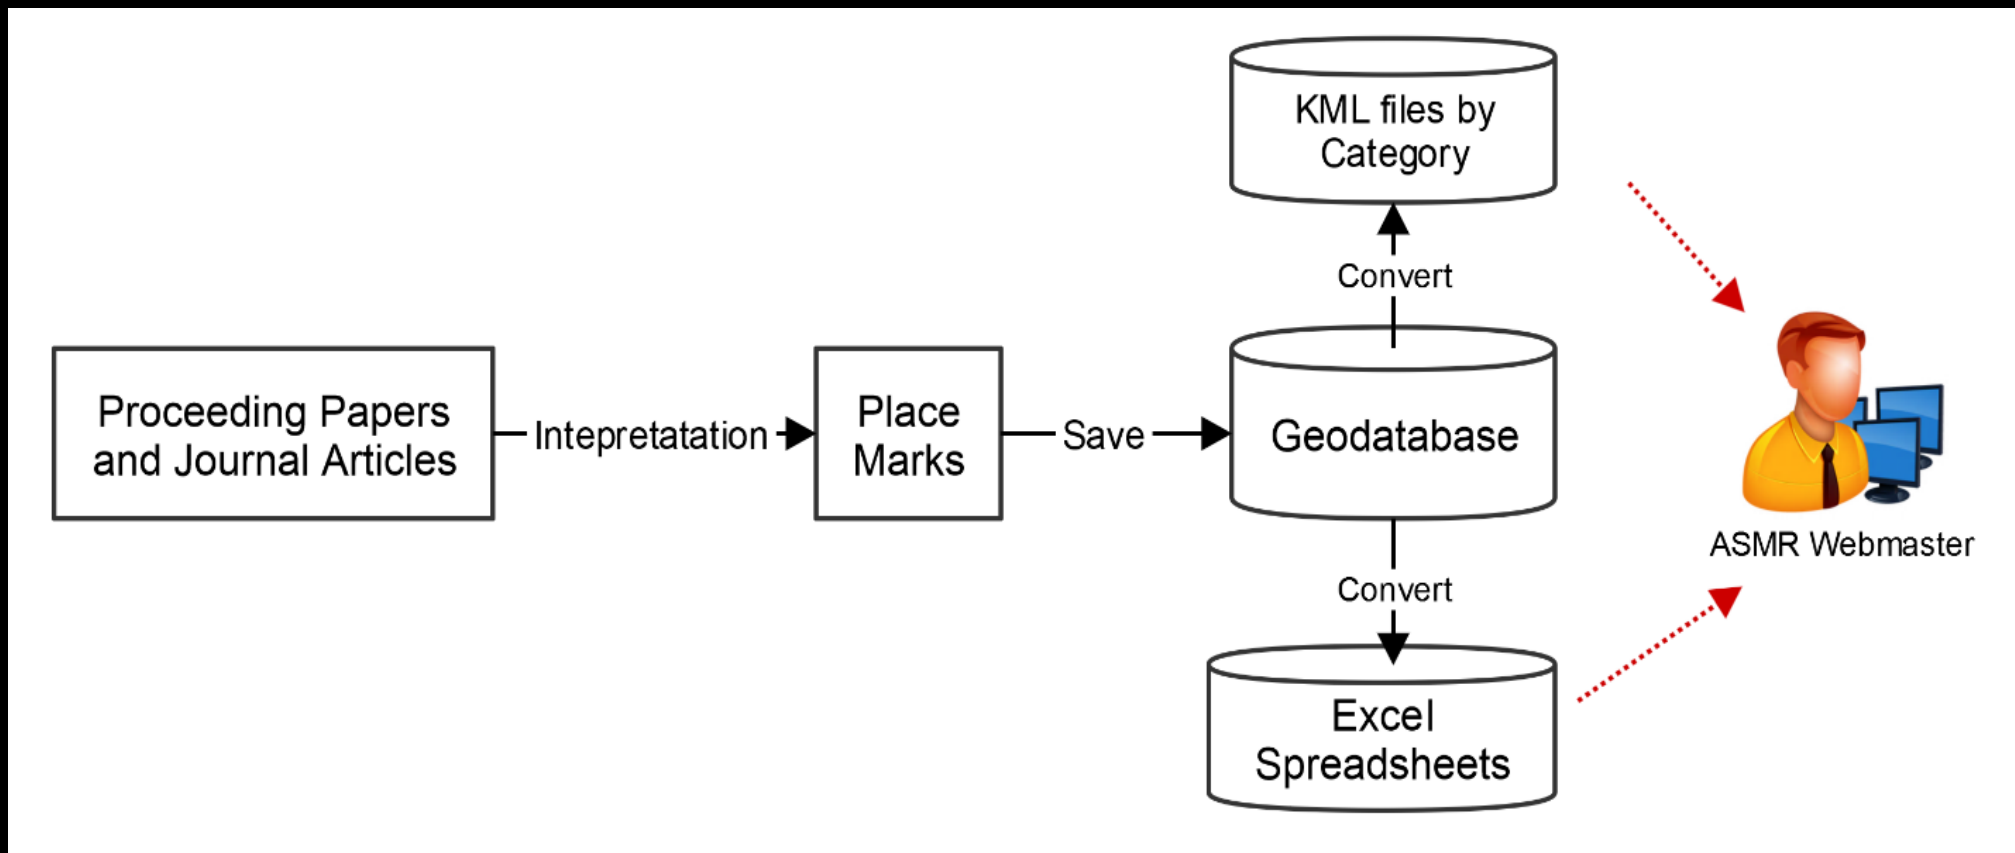

The Google Earth logo is positioned in the bottom right corner of the slide. It features the word "Google" in its signature multi-colored font, with the word "Earth" in a smaller, white, sans-serif font directly beneath it. The logo is set against a dark background that includes a partial view of the Earth's horizon and a starry space scene.

Google<sup>™</sup>  
Earth

# PROJECT GOALS

- To provide quality-assured geographic reference to proceeding papers published by the ASMR during 1988-1997 (1028 papers)
- To provide training opportunities of geospatial techniques for undergraduate and graduate students

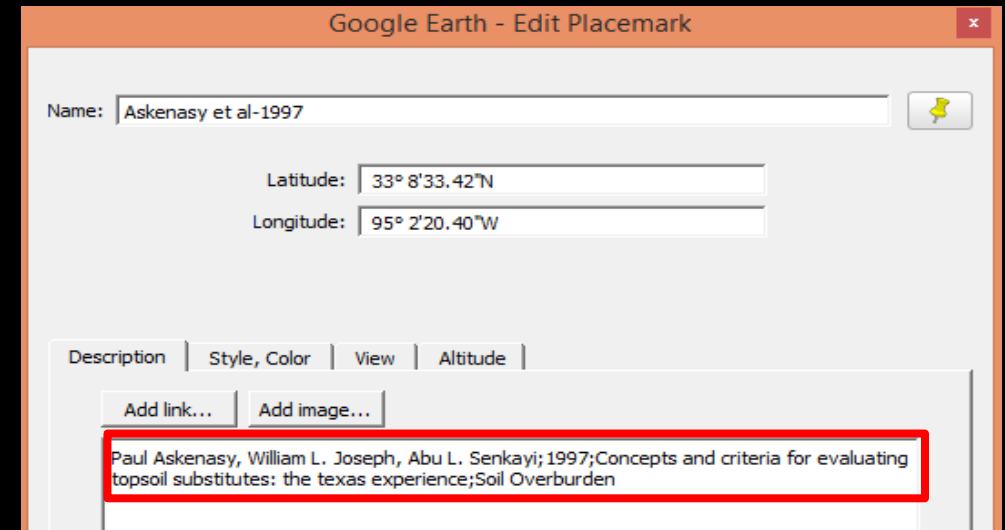

# METHODOLOGY

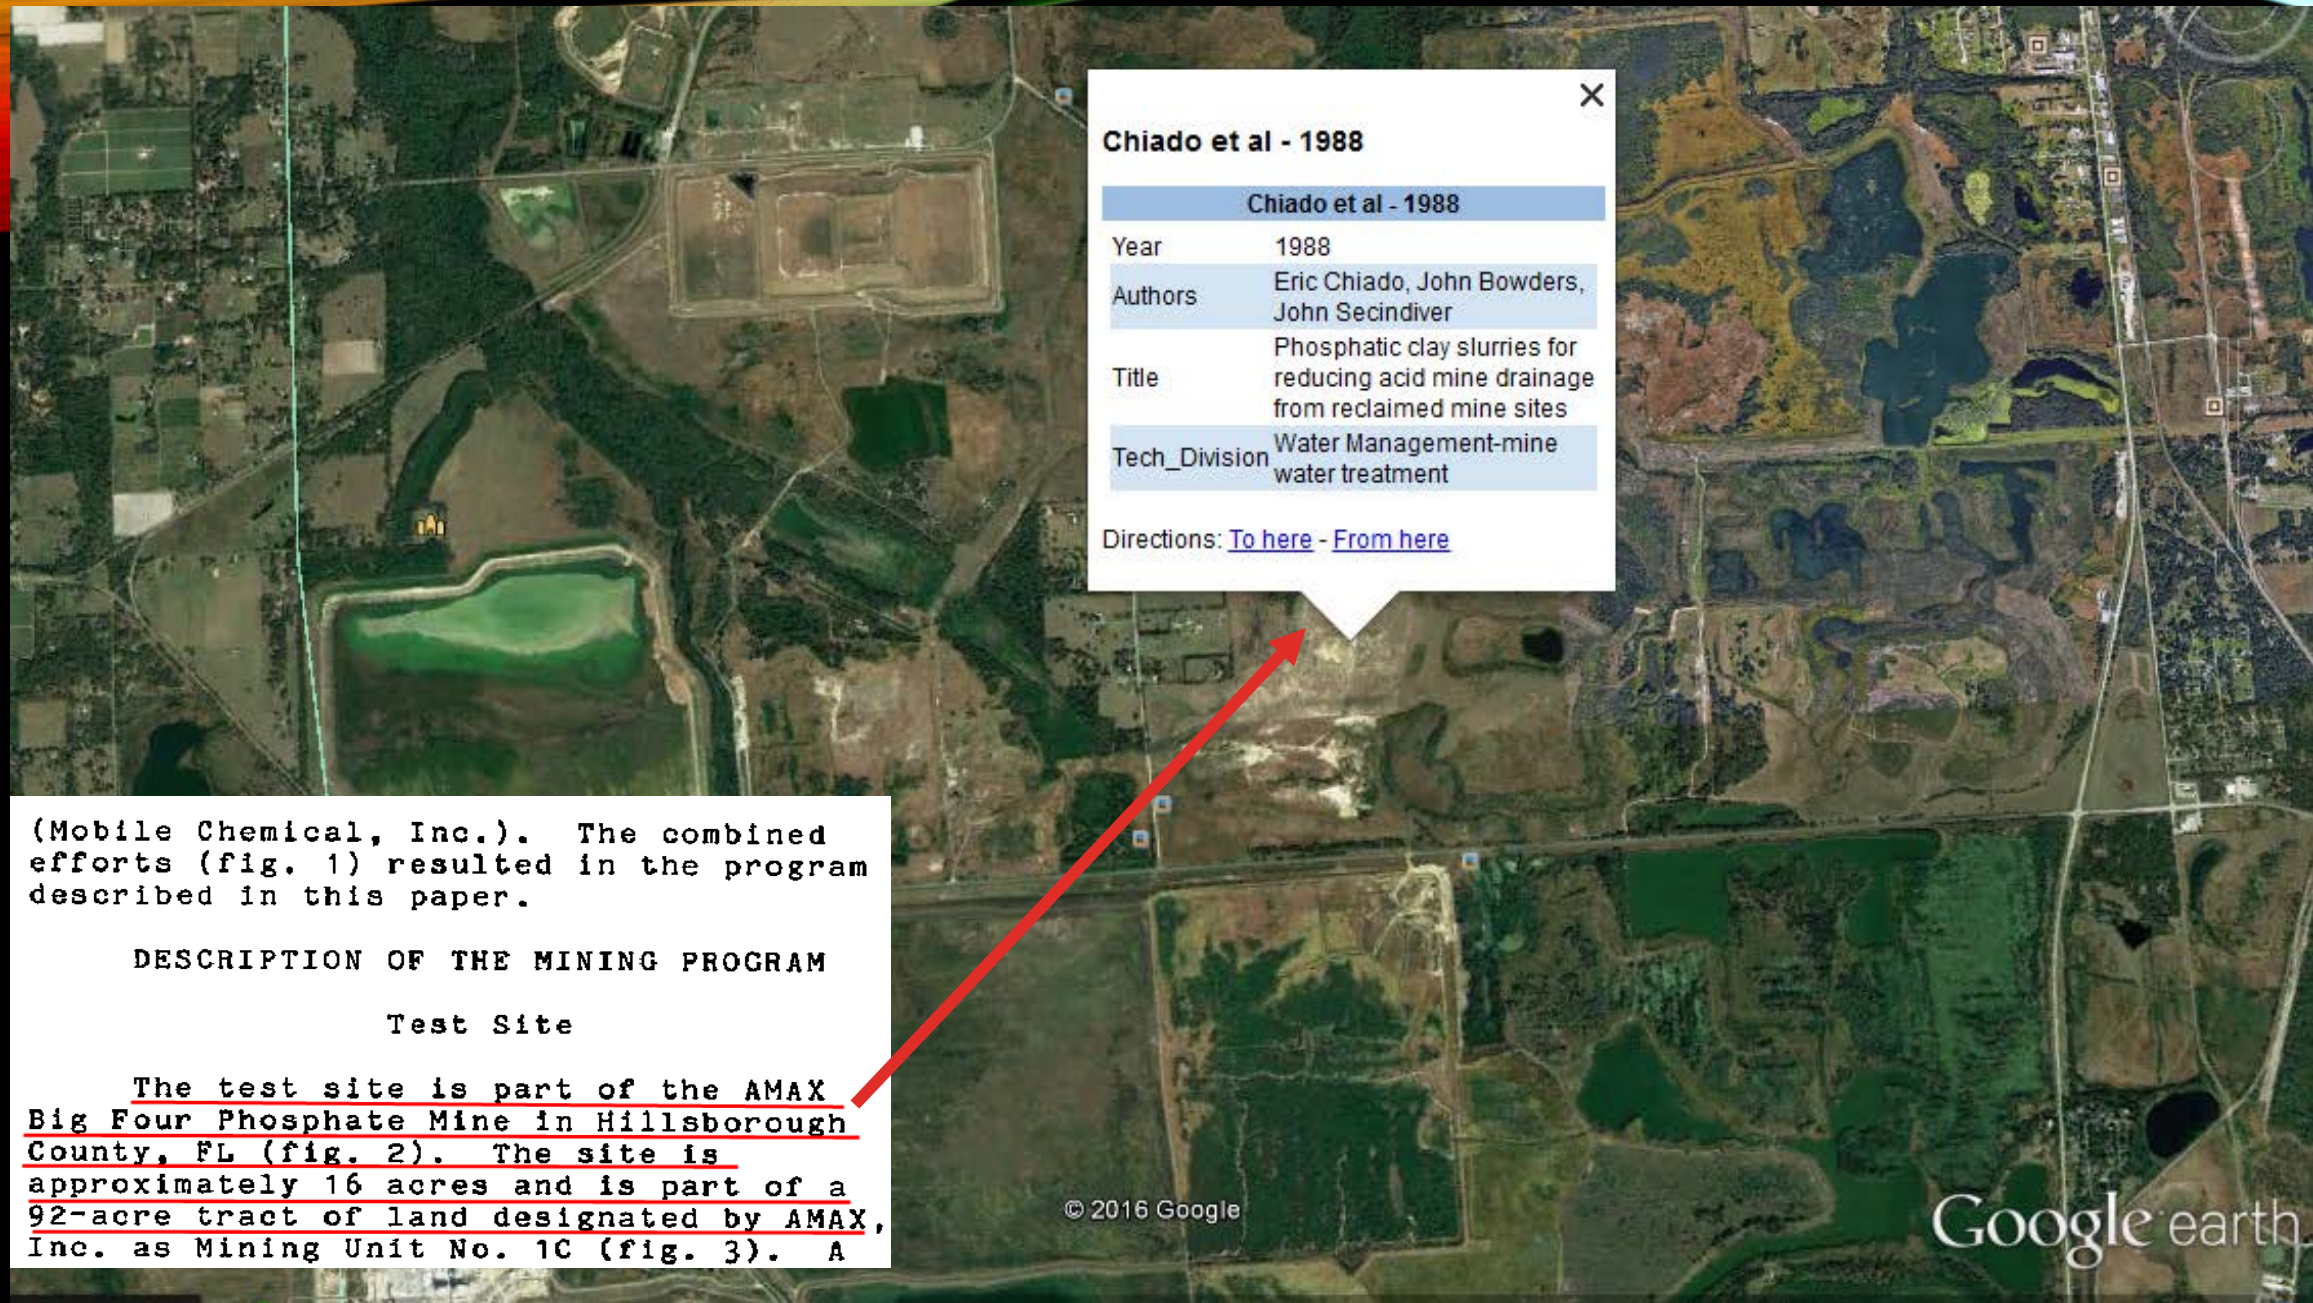

# METHODOLOGY

## Step 1: Manual interpretation and information inputs

- Read titles, abstracts, full texts, and make a placemark
  - Each student was assigned with two years of proceedings
  - A graduate assistant helped inspect the data quality
  - KML or KMZ data format
- Develop a project tutorial and have monthly meetings to address common issues and ensure the progress

Chiado et al - 1988

Chiado et al - 1988	
Year	1988
Authors	Eric Chiado, John Bowders, John Secindiver
Title	Phosphatic clay slurries for reducing acid mine drainage from reclaimed mine sites
Tech_Division	Water Management-mine water treatment

Directions: [To here](#) - [From here](#)

(Mobile Chemical, Inc.). The combined efforts (fig. 1) resulted in the program described in this paper.

#### DESCRIPTION OF THE MINING PROGRAM

##### Test Site

The test site is part of the AMAX Big Four Phosphate Mine in Hillsborough County, FL (fig. 2). The site is approximately 16 acres and is part of a 92-acre tract of land designated by AMAX, Inc. as Mining Unit No. 1C (fig. 3). A

# ASMR Project Tutorial

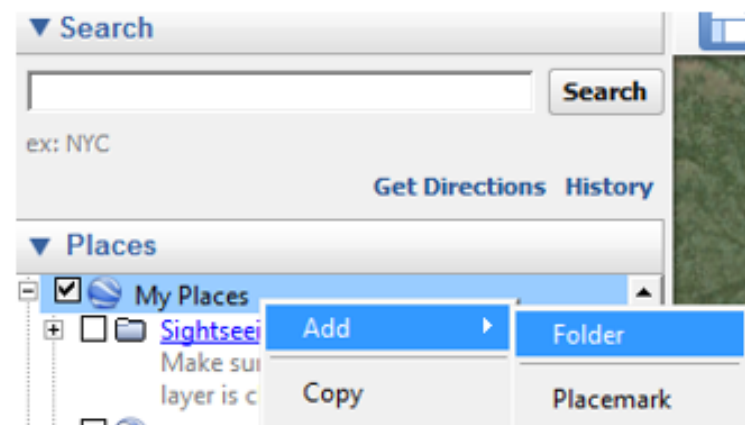

By Ruopu Li March 24, 2016

The purpose of this tutorial is to show the entire workflow that you will follow through the project.

## Step1: Set up the Google Earth folder for placemarks

Install and open the Google Earth. Since 2015, Google Earth Pro has been free to the public (<http://www.google.com/earth/download/gep/agree.html>) and you can use this powerful version for this project. The regular version of Google Earth is fine too.

Right click on My Places on its left panel and select Add -> Folder. You should use the year of the conference to name the folder. For example, you can name is 1984 or conference1984. In this step, you essentially set up a container to hold all of future placemarks.

**Step2: Read each conference proceeding papers allocated to you.**

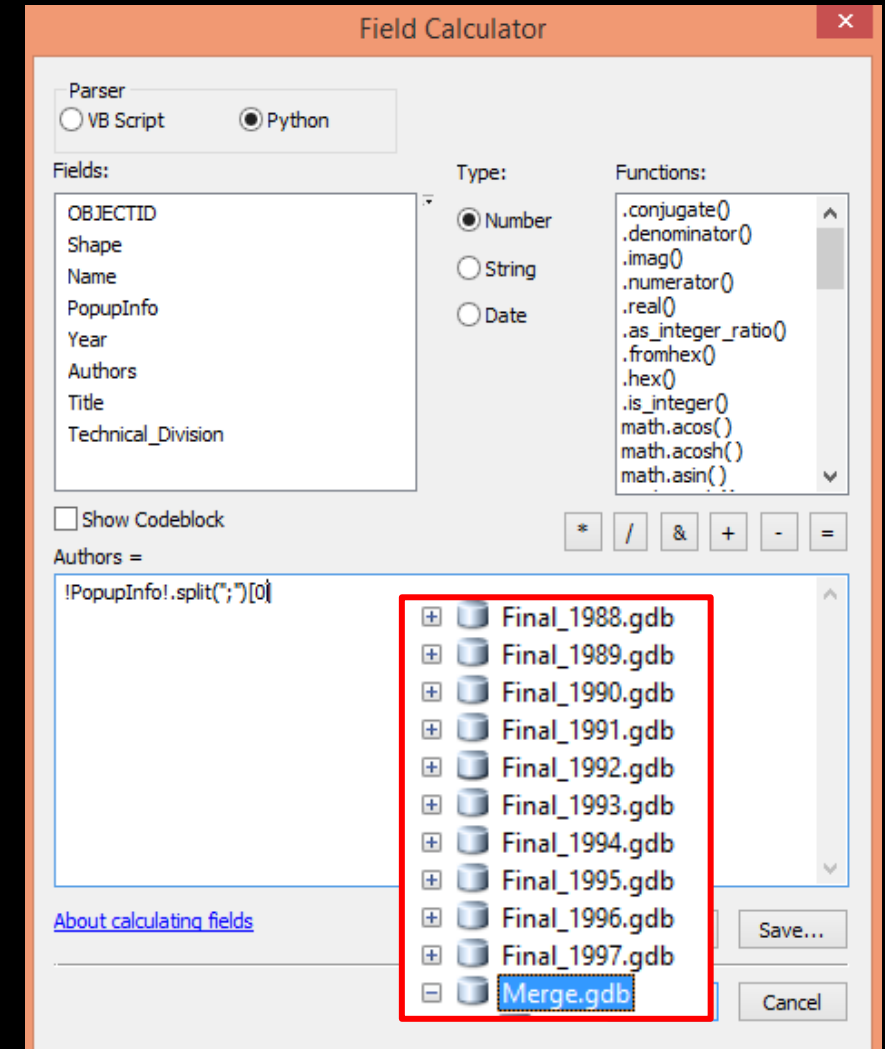

# METHODOLOGY

Step 2: Load the KML/KMZ files into a geodatabase

- Using ArcGIS software
  - KML to Layer tool
- Reformat the data with multiple fields
  - ArcGIS Field calculator
- Errors checking and fixing

Step 3: Data organization and outputs

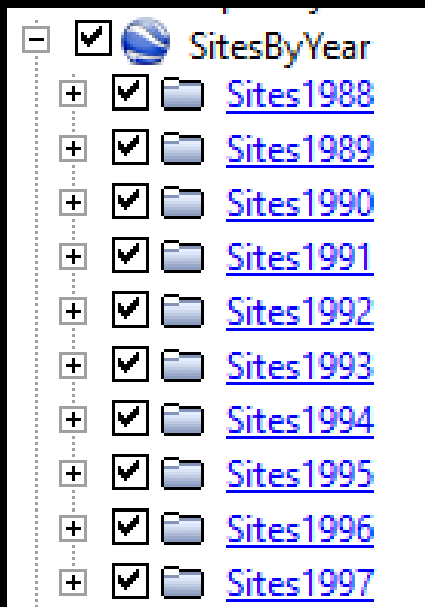

- KML data organized as years and technical divisions
- Excel spreadsheet required by the ASMR

# RESULTS

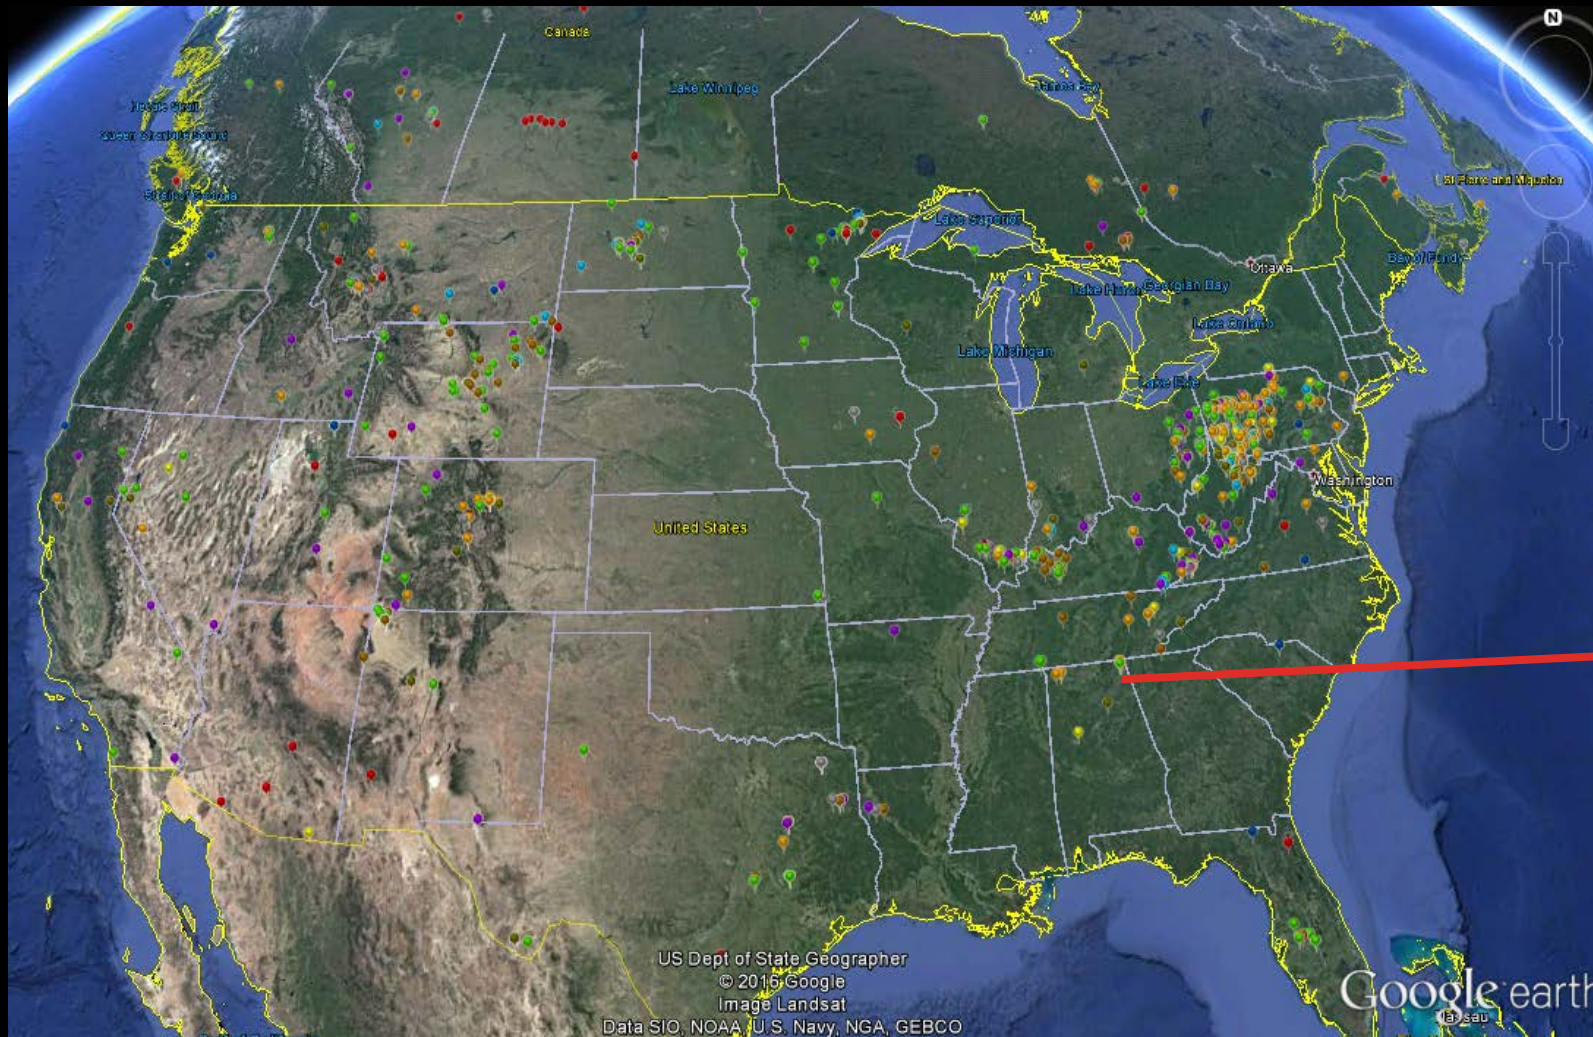

## KML/KMZ Format

## MS Excel Format

# RESULTS

A total of 765 placemarks

United States: 634 (82.8%)  
Canada: 66 (8.6%)  
Australia: 19 (2.5%)  
Great Britain: 15 (2%)

ASMR Proceeding Sites 1988-1997

# DATA QUALITY

- Quality Assurance and Quality Check (QAQC)
  - Positional accuracy, attribute accuracy, logical consistency and data completeness were checked
  - Three steps for data quality assurance
    - Student workers first checked the typos, positional correctness, formatting consistency and data completeness before their submission;
    - The graduate assistant checked the quality of the products and provided feedbacks to the student workers;
    - The project PI inspected the entire dataset and fixed any identified problems.
- The spatial accuracy of the placemarks still varies, depending on the details available in the papers.

# HOW THIS PROJECT BENEFITED STUDENTS

- Involving a total of 5 undergraduate and 2 graduate students (including my RA) through the SIU GIS Club
  - 6 students reported the results to the RA bi-weekly
  - The RA reported to the project PI
  - Students received training and attended project meetings regularly
- Link classroom knowledge to the real-world problem solving
- Addressed students' financial needs
- Strengthened students' resumes to compete in the job market

SIU GIS Club

# FUTURE DIRECTION

- The ASMR proceeding contributors should provide Latitude/Longitude along with their paper submission using Google Earth
- Alternatively, an easy-to-use online tool can be developed and integrated with the ASMR journal website
- Manual interpretation is valuable ...But not efficient
- Optical character recognition (OCR) + Machine Learning -> automatic geocoding ??
  - Formatting issues
  - How to match more exact locations? (instead of the centroids of a town)

# SUMMARY

- This project produced a total of 765 placemarks categorized by years and technical divisions using Google Earth;
- The data were produced as the KML/KMZ and MS Excel formats to meet the needs of the ASMR;
- The data were thoroughly QA/QC'ed;
- This project provided valuable educational opportunities for students.

# ACKNOWLEDGMENT

- We appreciate the generous funding support from the American Society of Mining and Reclamation
- The efforts from the following SIU students were key to the completion of this project: Tarig Mohamed, Brandon Polk, Anastasia Maranto, Kaitlyn Holtsclaw, Jatoya Hale, and Elizabeth Wilson.
